

FDA official list of possible side effects from Covid-19 Vaccines

FDA (Food and Drug Administration in the US)

Everyone is entitled to know what side effects there could be with a heavily promoted vaccine.

- Guillain-Barre syndrome
- Acute disseminated encephalomyelitis
- Transverse myelitis
- Encephalitis
- Myelitis
- Encephalomyelitis
- Meningoencephalitis
- Meningitis
- Encephalopathy
- Convulsions
- Seizures
- Stroke
- Narcolepsy
- Cataplexy
- Anaphylaxis
- Acute myocardial infarction (heart attack)
- Myocarditis
- Pericarditis
- Autoimmune disease
- Death

- Pregnancy, Birth outcomes
- Other acute demyelinating diseases
- Non anaphylactic allergy reactions
- Thrombocytopenia
- Disseminated intravascular coagulation
- Venous thromboembolism
- Arthritis
- Arthralgia
- Joint pain
- Kawasaki disease
- Multisystem inflammatory syndrome in children
- Vaccine enhanced disease

You aren't necessarily going to get all of those or even any of them if you have the vaccine. But those are the possible side effects that the FDA has listed.

They're all unpleasant, most of them very serious and you can't get more serious than death.

And if you are mad enough to have the vaccine then you and your doctor should keep a look out for the symptoms of all the diseases on the FDA's list.

Your government won't tell you about these dangers – they don't believe in fully informed consent as far as vaccines are concerned.
